Education

Birla Institute of Technology and Science, Pilani — January 2026 – December 2027
M.Tech. Machine Learning and Artificial Intelligence (Work Integrated Learning Programme) — *Remote, India*

Indraprastha Institute of Information Technology, Delhi — 2019 – 2023
B.Tech. Computer Science Engineering, CGPA: 8.34 — *New Delhi, India*

Stanford University (Online) - AI Technical Professional Certificate — 2026
Deep Reinforcement Learning, Reinforcement Learning, Deep Generative Models — *Remote*

Technical Skills

Languages: C++, C#, Python, TypeScript, JavaScript, KQL, SQL
Technologies/Frameworks: Azure, AWS, GCP, Azure DevOps, CI/CD; PyTorch, AI Foundry, MCP, A2A, LLM Evaluation; React.js, Node.js, Git, REST APIs

Experience

Microsoft — July 2023 – Present
Software Engineer — *New Delhi, India*

- Built **multi-agentic AI** and Copilot experiences for Azure enterprise customers, including an **RCA troubleshooting agent** that cuts incident debugging time from **days to hours**. Won **3rd place** at Microsoft's **Global Hackathon** for a Copilot–SAP workloads integration.
- Implemented **agent-to-agent (A2A)** communication end-to-end (**C# server APIs, Python client integrations** using the A2A SDKs), enabling 5 AI agents to coordinate workload onboarding to Azure for 100+ enterprise customers.
- Designed **LLM evaluation pipelines** on **Azure AI Foundry** for internal security reviews and prototyped agentic systems with **Semantic Kernel** and **MCP**.
- Remediated **50+ security vulnerabilities** in a production Azure service via **SDK**, dependency and **infrastructure upgrades**, bringing it to **full security compliance**; replaced password-based auth with **Managed Identity** and **least-privilege RBAC**, eliminating stored credentials.
- Designed and built from scratch a **certificate-based authentication system** for a mission-critical B2B telemetry platform serving **200+ Azure customers**; operating it with **zero production incidents** since its 2025 launch.
- Developed **C#** backend APIs from scratch for customer-facing lifecycle features (start/stop, deletion) in Azure Center for SAP Solutions with **automated test coverage**, and independently rolled the service out to **20+ Azure regions** via **Azure DevOps** pipelines.
- Own **Azure Portal** blade development for the product end-to-end in **React.js**, from UX/PM design reviews, coding and release across partner teams. Built **observability tooling (alerts, dashboards, KQL diagnostics)** used by on-call engineers.

Microsoft — May 2022 – July 2022
Software Engineer Intern — *Hyderabad, India*

- **Optimized** random forest-based SLA decomposition model based on paper by MSFT Research - Applying Machine Learning to End-to-end Slice SLA Decomposition, published by IEEE to improve training time and memory usage by 75% on 100+ GB datasets using **time profiling**, **vectorization** and **reduction in logging**.
- Built a distributed ML PoC using **PySpark** and **Databricks** demonstrating scalable pre-processing and training on large-scale datasets.

Wunderman Thompson (Salmon) — May 2021 – July 2021
Machine Learning Intern — *New Delhi, India*

- Built a next-basket **recommendation system** in PyTorch based on the DREAM algorithm (Dynamic Recurrent Basket Model), using **RNNs, pooling strategies, and dynamic user representations**.

Achievements

- Dean's Award — Excellence in TAship, Data Structures & Algorithms
- 800+ problems solved on LeetCode (Hard: 85, Medium: 467)
- Google Cloud Facilitator — enabled 200+ students to complete 80+ hours of GCP/ML labs
- JEE (Joint Entrance Examination) Advanced: Top 99.7 percentile amongst 100k applicants; Mains AIR 3366 (Top 99.73 percentile amongst a million applicants) - 2019; NTSE (National Talent Search Examination) Scholar - 2017

Publications

Erasing Labor with Labor: Dark Patterns and Lockstep Behaviors on Google Play — 2022
Co-author — ACM Conference on Hypertext and Social Media (HT '22)

- Built a dataset of **319K reviews** across 60 apps with **160.5M+ installs** using large-scale **data scraping**.
- Conducted UX analysis to detect dark patterns and reconfigured a state-of-the-art **microcluster anomaly detection** algorithm to surface coordinated review behavior.
